ALU THERMOWOOD PANELS

Give your façade an attractive and natural wood appearance without the need for ongoing maintenance. The wood slats are securely mounted on a powder-coated aluminum backing plate. The aluminum construction contributes to a stable and uniform façade.

FibroTech Alu ThermoWood Panels are developed for Nordic outdoor conditions and require only minimal maintenance compared to traditional timber cladding. The surface does not require oil treatment – the wood can remain untreated and will gradually develop a beautiful silver-grey patina over time. If a silver-grey appearance is not desired, the surface can be oiled 1–2 times per year, depending on environmental and weather exposure.

The product properties are based on testing and material characteristics and may vary depending on application and installation conditions. FibroTech Alu ThermoWood Panels are available in 4 colors: Black, Grey, Natural and Oiled. The panels can advantageously be installed using our accessories program and screws.
